

Satellite radio has been in my car since December 2003. For what it might be worth to you, my choice of provider is "XM" I could not be happier with their service, reception and programming. One of the most important things to me besides the diversity of programming is the local news and weather. I tune in the channel and it's right there in depth, complete, comprehensive. I reject the NAB petition 04-160. Satellite radio offers the choice and competition to AM-Fm stations that free enterprise demands. If "local" channels are losing listenership to satellite, let them get more competitive. Keep government out of this. Raymond P. Doell
